ABOUT ME

C/C++ Programmer with 5+ years of professional experience, specializing in **Unreal Engine, C, C++**, and systems-oriented programming. Developed multiplayer VR games, gameplay systems, development tools, and a game launcher. Built projects in C++ and OpenGL to deepen expertise in engine, graphics, and low-level systems programming. Previously worked as a **Linux Systems Administrator**.

SKILLS

- Programming Languages: C, C++, C#
- Unreal Engine (C++, Blueprints)
- OpenGL / Rendering
- Multiplayer / Networked Gameplay
- Linux Server Administration
- English (Advanced, C2)
- Spanish (Native)
- Automated Testing & Profiling
- Version Control (Perforce, Git)
- Agile & Scrum · Jira, Trello

EXPERIENCE

Software Developer R&D — Solar DQD 2026

- Developing AI-powered drone inspection software for operations & maintenance (O&M), conducting R&D in drone imaging, computer vision, and inspection workflows.

Unreal Engine Programmer — Yupix 2024 – 2026

- Developed an automated profiling system for Unreal Engine that captured runtime performance metrics during gameplay and generated detailed per-session HTML reports.
- Developed a system that captured and displayed the viewpoints of all connected clients on a single screen, enabling easy monitoring of game status, with browser-based access via Pixel Streaming and support for headless execution.
- Designed and developed a C# control panel integrated with the game launcher, providing centralized control including user, headset and game state management: level switching, teleports, volume control, and administrative permissions.
- Developed and maintained core features and systems for a multiplayer VR architectural visualization platform in Unreal Engine 4 and 5 (C++), along with core features of the game launcher (C#).

Gameplay Programmer — Nimble Giant Entertainment 2022 – 2023

- Programmer on a Virtual Reality title with Unreal Engine.
 - Led development of the game's tutorial and implemented NPC AI using behavior trees.
 - Collaborated with the design and art teams to implement and iterate on gameplay features.
- Platforms Programmer on an unannounced FPS with Unreal Engine.
 - Created automation tests using Unreal's automation system and automation driver.

Sysadmin / Developer — Madolsur 2013 – 2022

PROJECTS

- [Scoundrel](#) — Minimalist dungeon card adventure.
- [Glow](#) — Top-down shooter made with OpenGL. Bloom everywhere.
- [SDF Text Rendering](#) — Experiment to learn signed distance field text rendering.
- [Jsanchez-libs](#) — Single-header C libraries.
- [Math Library](#) — Game math library, column-major, designed for OpenGL use.
- [Toasty](#) — 3D model viewer.
