ABOUT ME:

Game Programmer with 3 years of professional experience in **Unreal Engine**, programming in **C++** and **Blueprints**, with experience in **multiplayer** systems. Passionate about game engines, rendering, and low-level programming, with a strong drive to explore and build engine internals. In my free time, I develop games from scratch to deepen my technical expertise. Previously, I worked as a Linux System Administrator, providing a solid foundation in systems-level knowledge.

SKILLS:

- Programming Languages: C & C++
- Unreal Engine (Blueprints, C++, ...)
- Unreal Engine Multiplayer
- English (Advanced, C2)
- Spanish (Native)
- OpenGL
- Version Control (Perforce, Git)
- Agile & Scrum
- Jira, Trello
- Linux Server Administration

EXPERIENCE:

2024-2025 | **Unreal Engine Programmer** at Yupix

- Developed and maintained core features for a **multiplayer VR architectural visualization platform** in Unreal Engine 4 and 5 using **C++ and Blueprints**.
- Implemented **network replication and multiplayer systems**, ensuring smooth synchronization across VR users.
- Worked on a **custom C# launcher** for the VR application, including version management, update handling, and an **experience control dashboard** (user management, headset assignment, level switching, teleports, volumes, etc.).

2022-2023 | **Gameplay Programmer** at Nimble Giant Entertainment.

- Programmer on a Virtual Reality title with Unreal Engine
 - As a developer **I took ownership over the tutorial and AI of the game**.
 - **Worked together with game design and art departments**, bringing to life several gameplay features.
- **Platforms Programmer** on a unannounced FPS with Unreal Engine
 - Created automation tests using Unreal's automation system and automation driver.

2013-2022 | **Sysadmin/Developer** at Madolsur.

- **Took the company online by creating its ecommerce website**. This increased sales not only online but in the brick & mortar stores too.
- Created a tool to send automated SMS messages. This **allowed the marketing department to advertise company promotions**. It was also used to send personalized payment plans to debtors. Recuperating money that was considered "lost".
- **Maintained the company's network infrastructure on a low budget**. Saving the company money by running our own mail server, web server and databases.

PROJECTS:

- **Glow** - Top down shooter made with OpenGL, Bloom everywhere.
- **Action Roguelike** - Professional Game Development in C++ and Unreal engine course.
- **SDF Text Rendering** - Little experiment to learn SDF text rendering.
- **Jsanchez-libs** - Single header libraries.
- **Math Library** - Game math library, column-major, designed for OpenGL use.
- **Gold Diggers** - Global Game Jam 2021 Entry (Unity).
- **Toasty** - 3D Model Viewer.
